

# Sam

## Current Fire, Emergency & Security Systems Apprentice

Sam joined OpenView in October 2021 as a FESS apprentice on our Framework Team, completing his apprenticeship with Skills for Security.

When we asked why he chose to join OpenView through an apprenticeship, Sam advised, *'I chose this route instead of others because I looked into the size of the company and the type of work that is carried out it is was something I could see myself doing. Also the fact that I would complete a level 3 apprenticeship stood out to me.'*

When we asked Sam about the best part of his apprenticeship so far, he said, *'Being given more responsibility when I'm working. I am always working with a lead engineer and now that I have some experience and I'm competent, the lead engineer let's me attempt faults and installs under supervision.'*

We asked Sam about how his course with Skills for Security, and how it is helping him in his day to day role. He advised, *'My apprenticeship helps my role a fair amount. I mostly work on the security side of the industry, so my college course definitely helps with my understanding of analogue systems.'*
