CASE STUDY

OPENVIEW INSTALLS STATE-OF-THE-ART SECURITY SOLUTIONS FOR XSCAPE LEISURE DESTINATIONS

Xscape is a year-round indoor destination experience where snow falls indoors in the Snozone centre, which offers skiing and snowboarding on real snow for beginners and experienced winter sports enthusiasts alike. Each Xscape venue offers a range of leisure and entertainment facilities including ski slopes, restaurants and Cineworld multiplex cinemas. Other activities include Hollywood bowling, Gravity Trampoline Parks, indoor adventure golf, climbing walls, indoor skate parks and soft play areas.

The Challenge

As part of the Landsec Group, Xscape wanted to upgrade the security systems for the Xscape leisure destinations in Milton Keynes and Castleford. With such a busy day/night economy, it was important to ensure that the security systems perform to the highest standards to keep visitors safe at all times Xscape wanted to install the latest IP HD CCTV cameras, CAT6 Ethernet infrastructure, video management and storage platform and video wall at each location.

The Solution

OpenView Security Solutions was chosen to carry out this upgrade after establishing a track record of successful CCTV deployments at a number of shopping centres that form part of Landsec's expanding property portfolio.

After conducting extensive site surveys, OSS carried out the first installation at Milton Keynes where 150 new IndigoVision IP HD cameras, including static and PTZ (pan, tilt and zoom) devices, were installed. The cameras were connected to a new CAT6 1GB Ethernet infrastructure which was supplemented with Wi-Fi for the more remote locations. An IndigoVision video management system and 60TB NVR (network Video Recorder) were also installed with a video wall comprising four 40" monitor screens.

This system is fast, easy to manage and delivers HD quality images to Xscape's control room enabling the security team to efficiently respond to any event anywhere in the multi-level entertainment complex or car parking areas.

OSS subsequently installed a similar system at Xscape in Castleford comprising 80 new IndigoVision IP HD cameras, including static and PTZ, connected to a new CAT6 Ethernet 1GB infrastructure supplemented with Wi-Fi for the more remote locations. An IndigoVision video management system and 60TB NVR (network Video Recorder) were also installed with a video wall comprising two 40" monitor screens.

"We are receiving an increasing number of enquiries from organisations in both the public and private sectors that want to upgrade their security in response to the rising threat levels across the UK," added Andy Ward, Sales Director of OpenView Security Solutions. "Installations of this kind demonstrate our ability to design and install high speed Ethernet infrastructures that enable the delivery of an effective response to this new environment."
